

900 Series Hardware

Vision's 900 Series hardware provides the ultimate combination of rugged durability and innovative functionality. As with all of our Advanced Hardware you get professional high strength dependability with sure grip over-sized rubber feet and our parallel Sure Struts that resist lateral twisting to prevent squeaks and instability.

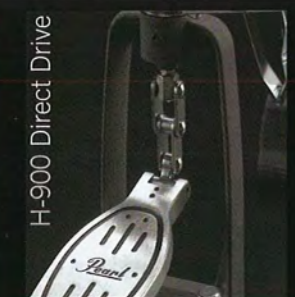

ProTone Heads
Vision Series features 2 ply Protone batter heads for tuning ease and full, rich sound. Our Bass drum features Perimeter EQ heads for optimal tone.

Parallel Sure-Struts
All 900 series tripod bases feature parallel sure-struts to add stability and prevent lateral movement and the inherent squeaks.

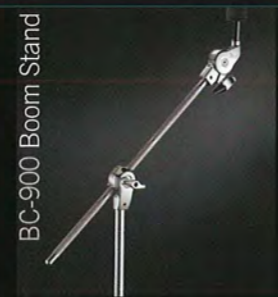

TH-900 Tom Arms
The newly designed TH-900 tom arms offer an infinite range of motion for superior tom placement combined with high strength for those crushing tom fills.

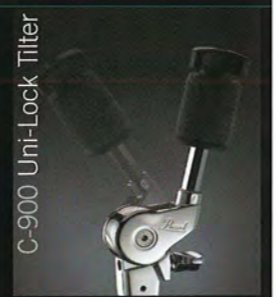

H-900 Hi-hat Direct Drive
H-900 Hi-hat features a direct pull system for lightning reaction, superior sensitivity and positive pedal feel.

H-900 Spring Tension Adjustment
H-900 spring tension is easily accessible via the large ergonomic knob. Dial it in for a precise fine-tunable hi-hat feel like you have never felt.

BC-900 Boom Stand
The BC-900 offers many of the award-winning features of our legendary BC-2000 boom stand. Over sized sure grip feet a wide range of angle and the option of straight or boom action.

C-900 Uni-Lock Tilter
900 Series Cymbal holders provide silky smooth tilt with infinite positioning and locking.

P-900 Bass Pedal

Precision machined footboard with PowerShifter function and styling influenced by our award winning Eliminator line of pedals. Aluminum cam promotes lightning attack with aggressive power and amazing sensitivity. Duo-Beater provides a choice of 2 striking surfaces.

PowerShifter

Pearl

VLX VISION VSX SERIES

Next Level Perfection

The Vision of 6/8

The fundamental thought behind our Award-winning Reference Series is to optimize every component of your kit to respond to its full potential within the confines of its respective frequency range. This is achieved through the usage of premium wood composition and shell thickness via strategic variance in the type and amount of plies. This same spirit of innovation is now available to the emerging musician in the all new Vision Series.

Vision Series offers a sonically advanced recipe of strategically arranged plies of premium wood to maximize frequency response in every component. As with all Pearl drums each shell is formed from our legendary SST construction process that uses extreme heat, Precision cut scarf joints, our proprietary Acoustiglue and over 1000lbs of hydraulic pressure to create the ultimate acoustic air chamber.

Extreme Strength Optimal Resonance Superior Tone

The Science of Vision

Pearl's 60 years of acoustic research has proven that the interior plies of the shell are the key influence to the overall sonic characteristic of the drum. Vision Series exploits this knowledge to the fullest by using two unique shell recipes of Birch and Basswood. Birch offers a resilient tightly bound network of cells that tend to accelerate rebounding sound waves making it perfect where mid to high frequencies are desired. Basswood provides a slightly softer cellulose composition which tends to slow the sound waves thus promoting mid to low frequency response. By adjusting the overall balance of one ingredient to the other allows a fine tuning of frequency response much like our Reference Series. Vision Series is 100% Pearl quality. The first kit constructed in our all new state of the art Chinese factory. Not one single component is out-sourced so that we can ensure every detail of this kit represents the finest acoustic drum kit available on the market today. We feel so strongly about the quality of this product that we proudly offer a limited lifetime warranty on all Vision kits, an industry first, only from your percussion leader, Pearl.

FTB-200 Floor Tom brackets provide fail-safe clamping force for dependable positioning.
FTL-200 Air Suspension feet promotes optimal resonance by insulating the shell from any dampening factors.
BB-300 Bridge Style Bracket keeps shell contact to the bare minimum for superior bass resonance.

Vision VSX. We've Got You Covered.
Vision Series offers a choice of 4 configurations in 4 VLX lacquer colors or VSX in a choice of 5 covered finishes to provide the very best of both worlds. VSX offers cutting edge metallic finishes, old school Strata colors color combined with road worthy durability. These amazing finishes offer a look unattainable by traditional paint methods.

Unbridled Attack
Pearl's all-new BT-300 bracket and I.S.S. mount provides the ultimate in strength and complete shell isolation for superior resonance, volume and maximum sustain.

High Strength, Low Mass
The advanced engineering of the new TLT-100 lugs provide high strength ease of tuning with miniscule shell contact to let the voice of the shell sing to its fullest potential.

SensiTone

Pearl's legendary SensiTone snare drums have been the choice of discerning drummers for years. As the name implies these drums provide extreme sensitivity combined with amazing tone and clarity due to their 5.5" steel shell that projects extreme volume with articulate response for dynamic power and cut.

SS1455S/C Sensitone Snare Drum

SR-900 Strainer
This Duo-Motion strainer can be converted from side lever action to Gladstone type.

Fast & Precise
The precision contoured lever allows fast and absolute on/off function. A large adjustment knob insures fine tuning for superior snare sensitivity.
